

Document Security

Fraud is a major problem all businesses face in the world today. In fact 50% of companies in North America have been victims of document fraud.* Implementing today's computer systems and technological advances in color copiers and scanners makes counterfeiting easier than ever before. Issuers of sensitive documents have a responsibility to show due diligence to deter fraud, especially if the documents contain personal information.

How to Use Security Features:

- **Use a layered approach.** On-paper and in-paper security features are the best approach to secure a document. Combining more than one security feature on a check or document deters criminals.
- **Use appropriate features.** If tellers or cashiers don't know what to look for, they can't prevent fraud. Take advantage of the warning band feature.
- **Understand fraud and how to combat it.** Empowering yourself against fraud is the best first step in fighting fraud and counterfeiting.

Protective Security Features Include

Chemically Reactive Paper

Printed on chemically reactive paper with high-polarity chemical solvents. Any forgery attempts on the document will leave a chemical trail, resulting in a stain indicating it's been tampered with.

Microprint Safety Line

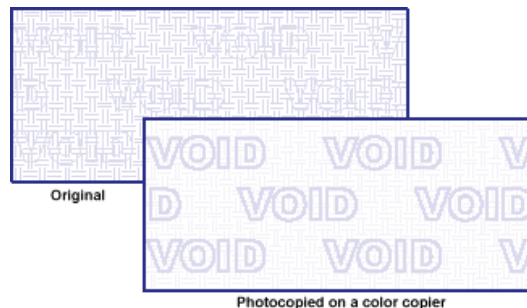

Line copy elements are electronically typeset with microscopic words that appear as a solid line. On original documents, the words can be seen under magnification. On copies, the print is virtually unreadable.

Heat-Sensing / Coin Reactive

Thermochromic inks are unique in that they are sensitive to temperature. When heat is applied the ink will turn colorless or change colors. Coin-Reactive inks are similar, but instead are printed colorless then react when rubbed with an average coin.

Industries at risk include:

- Financial
- Insurance
- Healthcare
- Manufacturing
- Government
- Education
- Hospitality
- Retail
- Non-Profit

Void Pantograph

Security pantograph build into a colored background. The word "Void" is designed to appear when the original document is photocopied or scanned.

Additional Features

1. Padlock Icon
2. Security Band Border
3. Prismatic Printing
4. Artificial Watermarks
5. Invisible Fluorescent Fibers
